Text styles

UV Print (UV)

This technology prints a layer on the chosen material. The colour of each UV print is carefully selected to best match each material's colour.

Laser Etch (L)

This technology exposes the base layer of the leatherette. Due to its invasive character, this technology is available on selected materials.

Embossed Text (E)

This technology impresses a bookbinding font which can be left plain or embossed with your choice of coloured foil. (White, Grey, Silver, Gold, Rose Gold, Metallic Red, Hot Pink, Brown, Navy, Turquoise, Black)

Stamp (S)

Created by pressing a set of characters onto a cover's surface. No new colours are created in the process, making it a subtle and elegant design option.
